

EU Funding for NEUROSCIENCES

Some of the funding programs available for Neurosciences in the EU include among others:

- Horizon Europe program
- European Research Council (ERC) grants
- Marie Skłodowska-Curie Actions (MSCA)

PhD. Naomi de Haas,
Senior Grant Consultant,
Hezelburcht B.V.

The EU provides a range of funding programs for researchers, including grants for individual researchers, collaborative projects, and research infrastructures.

The **Horizon Europe program** is the EU's flagship funding program for **research and innovation**, which includes funding for Neurosciences research.

The **ERC grants** are highly competitive and support individual researchers conducting **cutting-edge research** in their respective fields.

The **MSCA program** offers funding for researchers at **all career stages**, including PhD students, postdoctoral fellows, and experienced researchers, to carry out research in different EU countries.

To support its researchers in applying for funding, the UBNeuro collaborates since 2020 with the grant consultancy company Hezelburcht. Dr. Naomi de Haas is the primary contact point and has supported more than 15 researchers from UBNeuro during their grant preparation.

Save the Date!

27
APRIL

12.00 - 13.30 AM

**Aula 2105, Psychology
Faculty, Campus Mundet**

28
APRIL

12.00 - 13.30 AM

**Aula 11, Medicine and Health
Sciences, Campus Clinic**

During the talk she is going to present how UBNeuro and Hezelburcht can support you through the grant application process, an overview of current funding opportunities for Neurosciences on a European level, and lastly tips and tricks for preparing an application and finding partners.

Questions are very welcome during and after the session.
