

# THE INSTITUTE

The Institute of Neurosciences of the University of Barcelona is a frontrunner in international neuroscience research, being one of the few institutes in the world that investigates the brain at every level. Director: Jordi Alberch

UBneuro was created under the premise to gather all research at the University of Barcelona that focused on a common goal: understanding the nervous system as a whole to give response to society challenges. That is why our research includes fields as neurobiology, neuropharmacology, pathophysiology, neurology, psychiatry, clinical psychology,

neuropsychobiology and cognitive neurosciences.

As a university research Institute, we support training of the neuroscience research workforce and disseminate timely and accurate information about neurological and mental disorders to the research community, physicians, patient associations and the public.

The Institute has been awarded with the **Maria de Maeztu Excellence Unit** accreditation, and gathers around 460 researchers from the University of Barcelona. We encourage and welcome collaboration with international research groups and organisations.

## Ongoing

**613** Total Articles

6 CIBERs and RETICs

6 Spin off

16 Patents

4 Research professors

6 Academia professors

2 Advanced grants

2021**

## Research Areas

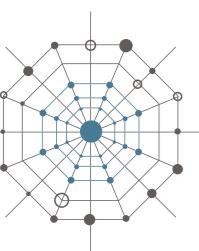

### Pathophysiology of Nervous System Diseases

Research in this area focuses on defining the pathophysiological mechanisms involved in the loss of neuronal plasticity. A deeper understanding of neuronal connectivity and dynamics, signalling molecules, cell-cell interaction and epigenetic factors in the nervous system will enable us to devise new pharmacological targets for therapeutic strategies.

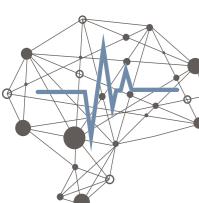

### Experimental Neurology

This area is focused on the study of the nervous system in normal conditions and during neurologic disorders. This includes studies about the correlation between genetic markers, cerebrospinal fluid biomarkers and structural, functional and molecular imaging in patients with movement disorders, dementia, autoimmune synaptic disorders and other neurological diseases.

### Mental Health

Under a multidisciplinary approach, the Institute actively embraces the challenge of advancing mental health knowledge around underlying neurobiological mechanisms, cognitive and daily life functioning. It also focuses on developing new treatments and therapies in psychotic and affective disorders in childhood, adolescence, and adulthood.

### Cognitive and Behavioural Neuroscience

This research area addresses the cerebral circuits, networks, processes and computational mechanisms that underpin a plethora of functions, such as perception, attention, memory, language, decision making, emotion and the control of action.

## Outstanding Publications in 2021

1. Crovetto, F., Crispi, F., Casas, R., Martín-Asuero, A., Borras, R., Vieta, E., Estruch, R., Gratacós, E., & IMPACT BCN Trial Investigators (2021). **Effects of Mediterranean Diet or Mindfulness-Based Stress Reduction on Prevention of Small-for-Gestational Age Birth Weights in Newborns Born to At-Risk Pregnant Individuals: The IMPACT BCN Randomized Clinical Trial.** *JAMA*, 326(21), 2150–2160. <https://jamanetwork.com/journals/jama/fullarticle/2786831>
